Inveready, leader in private debt according to Preqin

- Inveready recognized as one of the most consistent private debt fund managers, according to Preqin

San Sebastián, May 30, 2024.

Preqin, a renowned database recognized as the most reliable source of insights, outlooks, and tools for alternative asset professionals worldwide, has placed Inveready in the global ranking of private debt managers with the most consistent returns.

This recognition is particularly significant, as Inveready is the only Spanish manager to share this distinction, alongside globally renowned managers such as Adams Street Partners, GoldenTree Asset Management, Neuberger Berman, and Blue Torch Capital.

Furthermore, Preqin has highlighted the outstanding performance of the Inveready Venture Finance III fund, categorizing it as one of the best net IRR funds under $250M in its category.

Josep Maria Echarri, founding partner of Inveready, stated: "It is a pride to receive this recognition, especially because Inveready was a pioneer in launching Venture Debt funds in Spain. Twelve years later, we have demonstrated the value of these strategies for our more than 80 invested companies and the consistency of returns for our investors."

Inveready has just launched Trainera Venture Debt, in collaboration with Banco Santander, its 4th generation Venture Finance fund, the largest Venture Debt fund in Spain with 100 million euros.

Additionally, during the second quarter of 2024, Inveready has launched Convertible Tech Notes I, maximizing accumulated experience in debt management and returns achieved. This is a new fund that simultaneously represents the creation of a new category within the manager, focusing on convertible notes for high-growth European companies. This launch continues to demonstrate Inveready's ability to innovate in investment structures tailored to market needs at each moment.

Regarding Convertible Tech Notes I, Roger Piqué commented: "We are very excited about the launch of 'Convertible Tech Notes I,' the first fund in this new category within Inveready. The fund will focus on investing in high-growth companies, combining the predictability of debt return flows with the potential for capital return. This fund is the result of over 15 years of experience investing in both capital and debt, representing a unique synergy of both worlds, aimed at offering high capital typical returns with J-curve mechanisms and debt protection."
