Inveready, recognized for data-driven initiatives and ranked 58th globally

San Sebastián, June 4, 2024

In the second quarter of 2024, Inveready has been recognized for its data-driven initiatives. Data-Driven VC, led by the prestigious Dr. Andre Retterath, has acknowledged us as the 58th fund globally in implementing data-driven strategies.

These strategies encompass a wide range of initiatives aimed at incorporating the latest innovations in data processing and analysis (Big Data), as well as the most recent advances in Artificial Intelligence (AI and Generative AI) throughout the venture capital and debt fund value chain. This includes identifying new investment opportunities, conducting post-analysis, and ongoing monitoring.

Data-driven initiatives aim to provide teams with enhanced analytical capabilities and more comprehensive information in shorter time frames, essential for navigating the inherent complexities of venture capital investment. This is particularly crucial when investing in early-stage companies where potential may not be immediately apparent to all stakeholders. Data-driven approaches enable the analysis of trends or patterns in areas beyond the scope of conventional analysis.

For 2024, we aim to further enhance our platform with several new initiatives that will add significant incremental value. These include real-time market data integration to assess the competitiveness and market value of our portfolio companies, as well as automated report generation and insights derived from both market data and structured internal information gathered through advancements in portfolio management modules.
